

**When ordering DNM Stereo cables two points should be remembered:**

**1) DNM cables have four conductors in the ribbon, so cable orders are always made in stereo lengths.**

If required the stereo ribbon can easily be separated.

**2) To enable the cable length to be specified to within half a metre, the entry in the quantity box is in half-metres.**

So to receive **5 metres** of cable, enter **10** half metres in the **quantity** box.

To clarify the order flexibility this system offers and to explain how to order non-standard cables (like balanced interconnects and bi-wire speaker cables), some examples of cable order quantities versus required cable length/type are shown below.

**The quantities entries needed for various lengths of DNM Stereo Solid Core cable Interconnect cables**

**To order 1 half metre long DNM Stereo Solid Core Interconnect cable**

Enter **1** in the interconnect cable quantity box

**To order 1 one metre long DNM Stereo Solid Core Interconnect cable**

Enter **2** in the interconnect cable quantity box

**To order 2 one metre long DNM Stereo Solid Core Interconnect cables**

Enter **4** in the interconnect cable quantity box

**balanced interconnect cables**

We recommend using a complete four-conductor ribbon for each channel connecting the two inner conductors (blue and white) in parallel for the equipment ground connection.

**To order 1 stereo set of one metre long XLR-to-XLR balanced DNM Stereo Solid Core Interconnect cable**

Enter **4** in the interconnect cable quantity box

**Speaker cables**

**To order 1 stereo set of five metre long DNM “Precision 2” cable or “Resolution” cable**

Enter **10** in the appropriate cable quantity box

**To order 1 stereo set of five metre long *bi-wired* DNM “Precision 2” cable or “Resolution” cable**

Enter **20** in the appropriate cable quantity box
